

Coral Products Plc, turnover in excess of £30m revenue, is a curated group of businesses, each a specialist plastic products design house and UK manufacturer, trusted by leading UK brands and companies who are household names to provide customised, cost efficient and sustainable solutions, primarily for the food packaging, personal care, household, transport and communication sectors.

Through its two newly formed divisions Coral Products is a one stop shop for all plastic products and service solutions:

Flexibles Division

The flexibles division manufactures and distributes extruded, thermoformed, and film/laminate products primarily into the food sector.

Rigids Division

The rigids division designs, manufactures and distributes plastic injection, vacuum formed and extruded moulded products into a diverse range of sectors including personal care, food, household, healthcare, automotive, telecoms and rail.

The Group has manufacturing and distribution facilities throughout the UK concentrated around the Northwest of England.

We continually strive to nurture a well-motivated team also attracting and recruiting talented people to drive our business forward and foster a culture of responsibility, accountability and openness.

Our new cultural **4C** framework expresses the Coral approach to all stakeholder engagement:

Can-do

Showing determination to take action and achieve results. abilities.

Collaboration

Working together successfully to develop ideas effectively.

Confidence

The value you provide with self-assurance in your

Conviction

Allows individuals to overcome obstacles when they arise, with strong belief regardless of struggles.

We pursue profitability as the means of sustaining and growing shareholder value and to build an empowered employee community with strong social and environmental conscience. Our employees have the vision and resources to design, create and manufacture innovative solutions that meet genuine societal needs, consume less resources and, manufactured, used and recycled responsibly, does not harm the environment. Increasingly using 100% recycled plastics in our manufacturing processes is our commitment to the UK circular economy and contributes to our Scope 3 carbon emission reductions.

We also offer “end-of-life” recycling, where customers and users can return products to us once they have reached the end of their life cycle for recycling and reprocessing. Our manufacturing subsidiaries adopt a circular strategy by using recycled and reprocessed materials as a sustainable alternative wherever product specifications permit.
